

## Wet Cell Ni-Cad Batteries

Wet cell Ni-Cad batteries must be packaged so the terminals cannot contact each other through taping the terminals with non-conductive tape, individual bagging, placing non-conductive caps on the terminals, or packaging the used batteries in the original package. This will help to prevent short circuiting, any evolution of heat, and damage to the terminals. Larger wet cell Ni-Cad batteries need to have their terminals taped, and should be either packed in cubic yard boxes, or securely fastened on skids. Skids are to be no higher than two layers with cardboard or plywood in between the batteries, and shrink wrapped.

Wet cell Ni-Cad batteries should be shipped using the following U.S. Department of Transportation shipping name: UN2975 Batteries WET, FILLED WITH Alkali, 8, **PGIII**
